# Reflect On:

- What is my adjusted belief?
- What conclusion did I come to?
- What assumption(s) am I making?
- What meaning did I attribute to the data I selected?
- What is the select data I chose to focus on?
- What is the observable data (what would a video camera capture?)

And Then:

- What else could be going on?
- What data did I select?
- What data did I ignore/avoid?
- What else might be going on?
- Seek contrary data
  (Even if you have to make it up)

Reflect On:
